The chapters are extended versions of a selection of papers from the Proceedings of the 13th International Conference on Technology in Mathematics Teaching (ICTMT-13), which was held in Lyon, France, from July 3rd to 6th. ICTMT-13 gathered together over one hundred participants from twenty countries sharing research and empirical results on the topical issues of technology and its potential to improve mathematics teaching and learning. The chapters are organised into 4 themed parts, namely assessment in mathematics education and technology, which was the main focus of the conference, innovative technology and approaches to mathematics education, teacher education and professional development toward the technology use, and mathematics teaching and learning experiences with technology. In 13 chapters contained in the book, prominent mathematics educators from all over the world present the most recent theoretical and practical advances on these themes This book is of particular interest to researchers, teachers, teacher educators and other actors interested in digital technology in mathematics education.

From Text to 'Lived' Resources Ghislaine Gueudet,Birgit Pepin,Luc Trouche.2011-09-06 What kinds of curriculum materials do mathematics teachers select and use, and how? This question is complex, in a period of deep evolutions of teaching resources, with the proficiency of online resources in particular. How do teachers learn from these materials, and in

which ways do they 'tailor' them for their use and pupil learning? Teachers collect resources, select, transform, share, implement, and revise them. Drawing from the French term « ingénierie documentaire », we call these processes « documentation ». The literal English translation is « to work with documents », but the meaning it carries is richer. Documentation refers to the complex and interactive ways that teachers work with resources; in-class and out-of-class, individually, but also collectively.

Eye of the Crow Shane Peacock. 2009-05-12 Sherlock Holmes, just thirteen, is a misfit. His highborn mother is the daughter of an aristocratic family, his father a poor Jew. Their marriage flouts tradition and makes them social pariahs in the London of the 1860s; and their son, Sherlock, bears the burden of their rebellion. Friendless, bullied at school, he belongs nowhere and has only his wits to help him make his way. But what wits they are! His keen powers of observation are already apparent, though he is still a boy. He loves to amuse himself by constructing histories from the smallest detail for everyone he meets. Partly for fun, he focuses his attention on a sensational murder to see if he can solve it. But his game turns deadly serious when he finds himself the accused — and in London, they hang boys of thirteen. Shane Peacock has created a boy who bears all the seeds of the character who has mesmerized millions: the relentless eye, the sense of justice, and the complex ego. The boy Sherlock Holmes is a fascinating character who is sure to become a fast favorite with young readers everywhere.

Developing Teachers Chris Day. 2002-01-04 Effective schools or improving schools are fashionable terms in the rhetoric

of recent education movements, yet the heart of these movements is often more to do with teaching quality than with school practice. This book takes a holistic view of teacher development, examining the contexts and conditions of teaching: school leadership and culture; teachers' lives and histories; change; teacher learning, competence and expertise; and the moral purposes of teaching. Day looks at the conditions under which teacher development may be enhanced, and brings together research and other information, from the UK and overseas.

This is the first translation into a modern European language, of interest not only to historians of science but also to all mathematicians and mathematics teachers interested in the origins of their methods.

Indigenous and Decolonizing Studies in Education Linda Tuhiwai Smith,Eve Tuck,K. Wayne Yang.2018-06-14 Indigenous and decolonizing perspectives on education have long persisted alongside colonial models of education, yet too often have been subsumed within the fields of multiculturalism, critical race theory, and progressive education. Timely and compelling, Indigenous and Decolonizing Studies in Education features research, theory, and dynamic foundational readings for educators and educational researchers who are looking for possibilities beyond the limits of liberal democratic schooling. Featuring original chapters by authors at the forefront of theorizing, practice, research, and activism, this volume helps define and imagine the exciting interstices between Indigenous and decolonizing studies and education. Each chapter forwards Indigenous principles - such as Land as literacy and water as life - that are grounded in place-specific efforts of creating Indigenous universities and schools, community organizing and social movements, trans and Two Spirit practices, refusals of state policies, and land-based and water-based pedagogies.

La madrasa médiévale Lucien Golvin.1996 École coranique, collège, séminaire, pensionnat, cité universitaire avant la lettre ... : en arabe, le terme de madrasa recouvre quantité d'acceptations. Du Proche-Orient au Maghreb, l'ouvrage étudie l'évolution de l'architecture des principales madrasas (historique, éléments architectoniques, études des plans et masses, analyses des formes décoratives, rapports avec la maison particulière), et renouvelle les hypothèses sur la signification des madrasas cruciformes à quatre iwans = Koranic school, college, seminary, boarding school, campus before the letter ... : in Arabic, the term madrassa covers many of these meanings. From Middle East to North Africa, the book examines the evolution of the architecture of main madrassas (historical, architectural elements, study plans and bodies, analysis of decorative forms, reports with the special house); it also renews the assumptions on the significance of cross-shaped madrasas at four iwans.

The Burgess Shale Margaret Atwood.2017-03-17 "Atwood provides a window into her own early writing days . . . a

treasure for readers interested in Canadian literature because this is where it all began.” —Prairie Fire Review of Books “The outburst of cultural energy that took place in the 1960s was in part a product of the two decades that came before. It’s always difficult for young people to see their own time in perspective: when you’re in your teens, a decade earlier feels like ancient history and the present moment seems normal: what exists now is surely what has always existed.” In this short work, Margaret Atwood, author of *The Handmaid’s Tale* and “Canada’s most famous writer” (*The New Yorker*), compares the Canadian literary landscape of the 1960s to the Burgess Shale, a geological formation that contains the fossils of many strange prehistoric life forms. The Burgess Shale is not entirely about writing itself, however: Atwood also provides some insight into the meager writing infrastructure of that time, taking a lighthearted look at the early days of the institutions we take for granted today—from writers’ organizations, prizes, and grant programs to book tours and festivals. “Allows the reader a brief glimpse into the mind of a great writer and her perspective and experience living through what would now seem to many the Stone Age of the Canadian writing scene . . . invaluable and very readable.” —Canadian Literature

Teaching Mathematics to English Language Learners Gladis Kersaint, Denisse R. Thompson, Mariana Petkova. 2014-06-05 Today’s mathematics classrooms increasingly include students for whom English is a second language. *Teaching Mathematics to English Language Learners* provides readers a comprehensive understanding of both the challenges that face English language learners (ELLs) and ways in which educators might address them in the secondary mathematics classroom. Framed by a research perspective, *Teaching Mathematics to English Language Learners* presents practical instructional strategies for engaging learners that can be incorporated as a regular part of instruction. The authors offer context-specific strategies for everything from facilitating classroom discussions with all students, to reading and interpreting math textbooks, to tackling word problems. A fully annotated list of math web and print resources completes the volume, making this a valuable reference to help mathematics teachers meet the challenges of including all learners in effective instruction. Features and updates to this new edition include: An updated and streamlined Part 1 provides an essential overview of ELL theory in a mathematics specific context. Additional practical examples of mathematics problems and exercises make turning theory into practice easy when teaching ELLs. New pedagogical elements in Part 3 include tips on harnessing new technologies, discussion questions and reflection points. New coverage of the Common Core State Standards, as well as updates to the web and print resources in Part 4.

This book takes account of recent changes both in the media and in young people’s lives, and provides an accessible and cogent set of principles on which the media curriculum

should be based. Introduces the aims and methods of media education or 'media literacy'. Includes descriptions of teaching strategies and summaries of relevant research on classroom practice. Covers issues relating to contemporary social, political and technological developments.

Confronting the Challenges of Participatory Culture Henry Jenkins.2009-06-05 Many teens today who use the Internet are actively involved in participatory cultures—joining online communities (Facebook, message boards, game clans), producing creative work in new forms (digital sampling, modding, fan videomaking, fan fiction), working in teams to complete tasks and develop new knowledge (as in Wikipedia), and shaping the flow of media (as in blogging or podcasting). A growing body of scholarship suggests potential benefits of these activities, including opportunities for peer-to-peer learning, development of skills useful in the modern workplace, and a more empowered conception of citizenship. Some argue that young people pick up these key skills and competencies on their own by interacting with popular culture; but the problems of unequal access, lack of media transparency, and the breakdown of traditional forms of socialization and professional training suggest a role for policy and pedagogical intervention. This report aims to shift the conversation about the digital divide from questions about access to technology to questions about access to opportunities for involvement in participatory culture and how to provide all young people with the chance to develop the cultural competencies and social skills needed. Fostering these skills, the authors argue, requires a systemic approach to media education; schools, afterschool programs, and parents all have distinctive roles to play. The John D. and Catherine T. Une Journée a Londres (Dodo Press) Theophile Gautier.2009-03-01 Pierre Jules Theophile Gautier (1811-1872) est un poete, romancier, peintre et critique d'art francais. Lecteur avide, il a cinq ans lorsqu'il commence a lire. Sa grande passion est Robinson Crusoe. En 1820, a l'age de huit ans, il fait un bref sejour en tant que pensionnaire au lycee Louis-le-Grand. Tout en menant toutes les grandes campagnes romantiques, il ecrit un premier recueil de vers, dont son pere finance la publication. Il travaille egalement pour le magazine de Charles Malo, La France Litteraire, et pour le quotidien d'Emile de Girardin, La Presse. Dans ce journal, Gautier se charge d'abord de la critique d'art. On evalue a plus de deux mille le nombre des feuilletons et articles qu'il aurait rediges pour ce journal. Ainsi en 1838 parait La Comedie de la Mort, un recueil de poemes assez different des precedents ou, sous l'influence de Shakespeare, Goethe et Dante, Gautier sculpte avec vigueur le spectre de la Mort. En 1839, Gautier cede a la tentation du theatre qu'il admire depuis toujours et ecrit Une Larme du Diable puis Le Tricorne Enchante et Pierrot Posthume.

Cataclysms Laurent Testot.2020-11-09 Humanity is by many measures the biggest success story in the animal kingdom; but what are the costs of this triumph? Over its three million years of existence, the human species has continuously modified nature and drained its resources. In *Cataclysms*, Laurent Testot provides the full tally, offering a comprehensive environmental history of humanity's unmatched and perhaps irreversible influence on the world. Testot explores the interconnected histories of human evolution and planetary deterioration, arguing that our development from naked apes to *Homo sapiens* has entailed wide-scale environmental harm. Testot makes the case that humans have usually been catastrophic for the planet, "hyperpredators" responsible for mass extinctions, deforestation, global warming, ocean acidification, and unchecked pollution, as well as the slaughter of our own species. Organized chronologically around seven technological revolutions, *Cataclysms* unspools the intertwined saga of humanity and our environment, from our shy beginnings in Africa to today's domination of the planet, revealing how we have blown past any limits along the way—whether by exploding our own population numbers, domesticating countless other species, or harnessing energy from fossils. Testot's book, while sweeping, is light and approachable, telling the stories—sometimes rambunctious, sometimes appalling—of how a glorified monkey transformed its own environment beyond all recognition. In order to begin reversing our environmental disaster, we must have a better understanding of our own past and the incalculable environmental costs incurred at every stage of human innovation. *Cataclysms* offers that understanding and the hope that we can now begin to reform our relationship to the Earth.

Decolonizing Education Marie Battiste.2019-01-31 Drawing on treaties, international law, the work of other Indigenous scholars, and especially personal experiences, Marie Battiste documents the nature of Eurocentric models of education, and their devastating impacts on Indigenous knowledge. Chronicling the negative consequences of forced assimilation, racism inherent to colonial systems of education, and the failure of current educational policies for Aboriginal populations, Battiste proposes a new model of education, arguing the preservation of Aboriginal knowledge is an Aboriginal right. Central to this process is the repositioning of Indigenous humanities, sciences, and languages as vital fields of knowledge, revitalizing a knowledge system which incorporates both Indigenous and Eurocentric thinking.

Modern Mathematics Education for Engineering Curricula in Europe Seppo Pohjolainen, Tuomas Myllykoski, Christian Mercat, Sergey Sosnovsky. 2018-07-16 This open access book provides a comprehensive overview of the core subjects comprising mathematical curricula for engineering studies in five European countries and identifies differences between two strong traditions of teaching mathematics to engineers. The collective work of experts from a dozen universities critically examines various aspects of higher mathematical education. The two EU Tempus-IV projects – MetaMath and MathGeAr – investigate the current methodologies of mathematics education for technical and engineering disciplines. The projects aim to improve the existing mathematics curricula in Russian, Georgian and Armenian universities by introducing modern technology-enhanced learning (TEL) methods and tools, as well as by shifting the focus of engineering mathematics education from a purely theoretical tradition to a more applied paradigm. MetaMath and MathGeAr have brought together mathematics educators, TEL specialists and experts in education quality assurance from 21 organizations across six countries. The results of a comprehensive comparative analysis of the entire spectrum of mathematics courses in the EU, Russia, Georgia and Armenia has been conducted, have allowed the consortium to pinpoint and introduce several modifications to their curricula while preserving the generally strong state of university mathematics education in these countries. The book presents the methodology, procedure and results of this analysis. This book is a valuable resource for teachers, especially those teaching mathematics, and curriculum planners for engineers, as well as for a general audience interested in scientific and technical higher education.

The Rejection of Consequentialism Samuel Scheffler. 1994-08-11 In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

Mathematical Problem Solving ALAN H. SCHOENFELD.2014-06-28 This book is addressed to people with research interests in the nature of mathematical thinking at any level, to people with an interest in higher-order thinking skills in any domain, and to all mathematics teachers. The focal point of the book is a framework for the analysis of complex problem-solving behavior. That framework is presented in Part One, which consists of Chapters 1 through 5. It describes four qualitatively different aspects of complex intellectual activity: cognitive resources, the body of facts and procedures at one's disposal; heuristics, rules of thumb for making progress in difficult situations; control, having to do with the efficiency with which individuals utilize the knowledge at their disposal; and belief systems, one's perspectives regarding the nature of a discipline and how one goes about working in it. Part Two of the book, consisting of Chapters 6 through 10, presents a series of empirical studies that flesh out the analytical framework. These studies document the ways that competent problem solvers make the most of the knowledge at their disposal. They include observations of students, indicating some typical roadblocks to success. Data taken from students before and after a series of intensive problem-solving courses document the kinds of learning that can result from carefully designed instruction. Finally, observations made in typical high school classrooms serve to indicate some of the sources of students' (often counterproductive) mathematical behavior.

Algeria Is Beautiful like America Olivia Burton.2018-04-24 Algeria the Beautiful explores the rich heritage and tumultuous modern history of Algeria and its connections to Europe and colonialism. Olivia had always heard stories about Algeria from her maternal grandmother, a Black Foot (a "Pied-Noir," the French term for Christian and Jewish settlers of French Algeria who emigrated to France after the Algerian War of Independence). After her grandmother's death, Olivia found some of her grandmother's journals and letters describing her homeland. Now, ten years later, she resolves to travel to Algeria and experience the country for herself; she arrives alone, with her grandmother's postcards and letters in tow, and a single phone number in her pocket of an Algerian, Djaffar, who will act as her guide. Olivia's quest to understand her origins will bring her to face questions about heritage, history, shame, friendship, memory, nostalgia, fantasy, the nature of exile, and our unending quest to understand who we are and where we come from.
