Disease Control Priorities, Third Edition (Volume 2) Robert Black, Ramanan Laxminarayan, Marleen Temmerman, Neff Walker, 2016-04-11 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

Problem-Based Physiology Robert G. Carroll,2009-02-05 A fully problem-based, integrated physiology text, this new resource uses clinical case studies to promote interactive learning and to build a foundation of knowledge for clinical practice. Each case presents an unknown clinical disorder and examines differential diagnoses, treatments, and outcomes as well as relevant physiologic principles for a well-rounded review. Approximately 150 illustrations (most in full color) reinforce learning of the written material, while a practice test of USMLE-style questions-with explanations-aids in USMLE Steps 1 and 2 preparation. Features a problem-based approach to promote interactive learning and to build a foundation of knowledge for the USMLE Steps 1 and 2 as well as for clinical practice. Presents a summary of physiologic principles related to each unknown clinical disorder, along with differential diagnoses, treatments, and outcomes for a well-rounded review. Includes nearly 150 illustrations, most in full color, that reinforce learning of the written material.

Reproduction Nick Hopwood, Rebecca Flemming, Lauren Kassell, 2018-12-06 From contraception to cloning and pregnancy to populations, reproduction presents urgent challenges today. This field-defining history synthesizes a vast amount of scholarship to take the long view. Spanning from antiquity to the present day, the book focuses on the Mediterranean, western Europe, North America and their empires. It combines history of science, technology and medicine with social, cultural and demographic accounts. Ranging from the most intimate experiences to planetary policy, it tells new stories and revises received ideas. An international team of scholars asks how modern 'reproduction' - an abstract process of perpetuating living organisms - replaced the old 'generation' - the active making of humans and beasts, plants and even minerals. Striking illustrations invite readers to explore artefacts, from an ancient Egyptian fertility figurine to the announcement of the first test-tube baby. Authoritative and accessible, *Reproduction* offers students and non-specialists an

essential starting point and sets fresh agendas for research.
