Tables of Bond Values Joseph Deghuée.2018-02-20 Excerpt from Tables of Bond Values: With Supplement for Values of 52 1/2 100 Years It is evident that each of these investments pays for ten successive half-years the recorded rate of interest on the amount which remains invested, and that this rate of interest cannot possibly depend on anything else but the price paid for the bond, the interest on its par value, and the number of years which it has to run. If the bond is bought at par, the realized semi-annual interest equals the semi annual payment, and the investment remains the same. If the bond is bought below par, the realized semi-annual interest on the money invested exceeds the semi-annual payment, and, by the addition of this excess, the investment gradually rises to par. If the bond is bought above par, the semi-annual payment exceeds the realized semi-annual interest, and, by the withdrawal of this excess, the investment gradually sinks to par. The results given in these tables are found by the following formula. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1919 edition. Excerpt: ...of results may as well leave these bonds which have an extra high current income to other investors who place exceptional weight on that point. The bonds having a low current annual income but a higher yield according to the bond tables are more to his advantage in the end. Or, to come at the matter from the opposite direction, bonds paying a low rate of interest are likely to be a better bargain than bonds paying a high rate of interest but showing the same yield. A 4% bond yielding 6% is likely, other things being equal, to be a better bond than a bond yielding 6%. A 4% bond yielding 6% is probably entitled to as good an investment rating as a 6% bond yielding 5.75% or even less. The investor will of course bear in mind that this is only one element in bond values. I have discussed it rather fully because it has heretofore been neglected. Especially, the reluctance of many investors to buy bonds selling considerably above par sometimes has an influence directly opposite to that here discussed. Effect of Taxation on Bond Values The state of affairs in regard to the taxation of bonds, considering the country as a whole, can only be described as a disgraceful mess. In nearly all states bonds are considered as intangible personal property and as such are subject to_ the regular personal property tax, which is sometimes so high that it becomes an important factor. But many owners of bonds have a way of forgetting that bonds are personal property when the tax assessor comes around--in fact, there are very few subjects in regard to which memory is more treacherous. It is also to be borne in mind that the rate per cent. of the personal property tax in any locality, when taken alone, does not tell what the taxes are. The rate of assessment is...

When cherry picking a bond to invest in buying, it can be eminently overwhelming to ascertain which particular bond is apt to yield the highest return on investment overtime from its coupon payments and principal payment. There are an exorbitant amount of disparate types of bond to choose from when investing in buying bond which can render the prospect of becoming a bond investor all the more overwhelming for the novice equity investor. Some of the ample types of bonds encompass corporate bonds, junk bonds, municipal bonds, treasury bonds,

adjustment bonds, agency bonds, foreign bonds, convertible bonds, and non-conventional bonds Out of all the disparate of bonds to invest in buying, the utmost best types of bond to invest in buying are corporate bonds that are AAA rated bonds. The prudent bond investor should take heed of investing in buying corporate bonds that bear minimal default risks and that also offer the highest coupon rates relative to their default risks. Ideally, these corporate bonds should be procured from companies that have a long proven track record of profitability and being able to meet their financial obligations to their creditors. Bonds that trade at a premium will typically bear higher coupon rates than bonds that trade at a discount. Bonds do not always trade on par and conservative bond investors have a proclivity to buy AAA rated bonds to minimize default risks even though AAA rated bonds can sell at a premium. AAA rated bonds are the quintessential bonds for bond investors to invest in procuring since they have minimal default risks which renders the bond investor all the more apt to be able receive their coupon payments and principal payment post buying the AAA rated bond. AAA rated bond are the highest rated bonds. AAA rated corporate bonds typically offer higher coupon rates than treasury bonds while offering minimal default risks. Many corporate bonds trade in the secondary market, which permits investors to buy and sell these securities after they have been issued. By doing so, investors can potentially benefit from selling bonds that have risen in price or buying bonds after a price decline There are many types of corporate bonds, such as short-term corporate bonds that mature in five years or less, medium-term corporate bonds that mature in five to twelve years, and long-term bonds that mature in more than 12 years. Corporate bonds may offer many different coupon structures, such as a zero-coupon rate, a fixed coupon rate, a floating coupon rate, or a step coupon rate. A step coupon rate provides interest payments that change at predetermined times, and usually increase. Most of these securities come with a call provision, meaning that investors receive the initial interest rate until the call date. After reaching the call date, the issuer either calls the bond or hikes the interest rate. Bond investors should invest in buying long term AAA rated corporate bonds that yield the highest coupon rates relative to their default risks.

Bond Math Donald J. Smith.2011-07-05 A guide to the theory behind bond math formulas Bond Math explores the ideas and assumptions behind commonly used statistics on risk and return for individual bonds and on fixed income portfolios. But this book is much more than a series of formulas and calculations; the emphasis is on how to think about and use bond math. Author Donald J. Smith, a professor at Boston University and an experienced executive trainer, covers in detail money market rates, periodicity conversions, bond yields to maturity and horizon yields, the implied probability of default, after-tax rates of return, implied forward and spot rates, and duration and convexity. These calculations are used on traditional fixed-rate and zero-coupon bonds, as well as floating-rate notes, inflation-indexed securities, and interest rate swaps. Puts bond math in perspective through discussions of bond portfolios and investment strategies. Critiques the Bloomberg Yield Analysis (YA) page, indicating which numbers provide reliable information for making decisions about bonds, which are meaningless data,

and which can be very misleading to investors Filled with thought-provoking insights and practical advice, this book puts the intricacies of bond math into a clear and logical order.
