Typo David Silverman.2009-02-01 Two months before David Silverman's 32nd birthday, he visited the Charles Schwab branch in the basement of the World Trade Center to wire his father's life savings towards the purchase of the Clarinda Typesetting company in Clarinda, Iowa. Typo tells the true story of the Clarinda company's last rise and fall — and with it one entrepreneur's story of what it means to take on, run, and ultimately lose an entire life's work. This book is an American dream run aground, told with humor despite moments of tragedy. The story reveals the impact of losing part of an entire industry and answers questions about how that impacts American business. The reader sees in Clarinda's fate the potential peril faced by every company, and the lessons learned are applicable to anyone who wants to run his or her own business, succeed in a large corporation, and not be stranded by the reality of shifting markets, outsourcing, and, ultimately, capitalism itself.

Registries for Evaluating Patient Outcomes Agency for Healthcare Research and Quality/AHRQ.2014-04-01 This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve

many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DECIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
