**Paediatric Pulmonary Function Testing** Jürg Hammer, Ernst Eber. 2005-01-01 This book represents a comprehensive review of the most recent developments in paediatric pulmonary function testing and their clinical applications in common paediatric respiratory disorders. The first section reviews the current lung function tests used in infants and toddlers who are by nature unable to cooperate with most testing procedures. It describes the methodologies, provides normal values where available, and gives advice for data interpretation. The second section deals with the classic adult-type pulmonary function tests and their application in the semi-cooperative or cooperative.

*Handbook of Perinatal Clinical Psychology* Rosa Maria Quatraro, Pietro Grussu. 2020-03-26 The book examines the major issues in perinatal clinical psychology with the presence of theoretical information and operational indications, through a biopsychosocial approach. The multiplicity of scientific information reported makes this book both a comprehensive overview on the major perinatal mental health disorders and illnesses, and a clinical guide. It covers perinatal clinical psychology through a journey of 15 chapters, putting the arguments on a solid theoretical basis and reporting multiple operational indications of great utility for daily clinical practice. It has well documented new evidence bases in the field of clinical psychology that have underpinned the conspicuous current global and national developments in perinatal mental health. As such, it is an excellent resource for researchers, policy makers, and practitioners - in fact, anyone and everyone who wishes to understand and rediscover, in a single opera, the current scientific and application scenario related to psychological health during pregnancy and after childbirth.

*The Mother's Hands: Desire, Fantasy and the Inheritance of the Maternal* Massimo Recalcati. 2019-06-04 In this book the bestselling author and psychoanalyst Massimo Recalcati offers a fundamental re-examination of what 'being a mother' means today, in a world where new social and sexual freedoms mean that motherhood is no longer the sole destiny of women. Questioning the belief that a mother's love is natural and unconditional, he paints a more complex and troubling picture of the mother-child relationship, observing that mothers may even resent their children as a result of unresolved conflicts between different dimensions of love. The mother's hands not only nurture but can also potentially harm. Recalcati argues that it is precisely in these competing demands that motherhood fulfils its function: only if the mother is 'not-all-mother' can a child experience the absence that enables it to access the symbolic and cultural world. Recalcati cuts through conventional

wisdom to offer a fresh perspective on the changing nature of motherhood today. An international bestseller, this book will appeal to a wide general readership, as well as to students and scholars of gender studies, psychoanalysis and related disciplines.

Infant Musicality Johannella Tafuri.2017-07-05 What can infants hear? What are their reactions to music? Is it useful for them to sing and listen to music? Is their auditory sensitivity developed before their birth? At what age do they start singing, and clapping their hands? How can their musical development be improved? These (and other) questions are present in today's debate on music education and the responses are normally given in an intuitive way. It is now necessary and urgent to sketch a developmental profile of infants, starting from their earliest manifestations. In the last 30 years, research in this field has been progressively developed. In most cases research has been devoted to single aspects of more complex problems. Moreover, it has been based on non-homogeneous categories of subjects and by different methods. Motivated by the fact that many open problems need to be solved, Professor Tafuri decided, in 1998, to begin a longitudinal research project devoted to studying the musical development in children from 0 to 6 years, with particular attention on the ability to sing in tune. During these 6 years, the children would have a regular music education experience with their mothers and often other members of the immediate family. This book has two main areas of focus. The first reconstructs the development of human musical abilities. Tafuri systematically reports studies of the development of vocal, rhythmic and motor abilities through the observation of the same participants for three years, beginning with the mothers' experiences in the last three months of pre-natal life. The programme of musical activities and the modalities of the collaboration with the parents are described. The second area of focus puts forward an educational perspective based on the results of the research. The amount and the quality of the collected data can allow parents and educators to plan different activities by considering the starting point for individual participants and the development of the

The Primary Triangle Elisabeth Fivaz-depeursinge,Antoinette Corboz-warnery.1999-05-18 In the spirit of Daniel Stern's landmark *Interpersonal World of the Infant*, this is the first book to extend the model of mother-infant dialogue to the larger family system.

EBOOK: European Child Health Services and Systems: Lessons without Borders Ingrid Wolfe, Martin McKee.2014-02-16

The book will focus on three key aspects of delivery of child health services: service integration and coordination, public health measures, and enhancing the quality of care for children. Taking a child-centric view on understanding how health services and systems work the book aims to contribute towards improving children's health through deepening the understanding of children's health services. Focusing primarily on the western European countries the book draws on research conducted with child health leaders in ten countries: Austria, Britain, Finland, France, Israel, Italy, Netherlands, Norway, Poland, and Sweden. The chapters include clinical scenarios designed to help identify and describe the various ways in which children and their families negotiate health services when dealing with twelve different conditions. Using clinical scenarios in this way allows the book authors to capture the diverse aspects of each health system as well as assessment and analysis of the challenges involved in each, and their successes and failures.

"Surely You're Joking, Mr. Feynman!": Adventures of a Curious Character Richard P. Feynman.2018-02-06 One of the most famous science books of our time, the phenomenal national bestseller that buzzes with energy, anecdote and life. It almost makes you want to become a physicist (Science Digest). Richard P. Feynman, winner of the Nobel Prize in physics, thrived on outrageous adventures. In this lively work that "can shatter the stereotype of the stuffy scientist" (Detroit Free Press), Feynman recounts his experiences trading ideas on atomic physics with Einstein and cracking the uncrackable safes guarding the most deeply held nuclear secrets—and much more of an eyebrow-raising nature. In his stories, Feynman's life shines through in all its eccentric glory—a combustible mixture of high intelligence, unlimited curiosity, and ragingchutzpah. Included for this edition is a new introduction by Bill Gates.

**The Absorbent Mind** Maria Montessori.2013-03-25 The Absorbent Mind was Maria Montessori's most in-depth work on her educational theory, based on decades of scientific observation of children. Her view on children and their absorbent minds was a landmark departure from the educational model at the time. This book helped start a revolution in education. Since this book first appeared there have been both cognitive and neurological studies that have confirmed what Maria Montessori knew decades ago.

*Human Casualties in Earthquakes* Robin Spence,Emily So,Charles Scawthorn.2011-01-03 Assessment of human casualties in earthquakes has become a topic of vital importance for national and urban authorities responsible for emergency provision, for the development of mitigation strategies and for the development of adequate insurance schemes. In the last few years important work has been carried out on a number of recent events (including earthquakes in Kocaeli, Turkey 1999, Niigata Japan, 2004, Sichuan, China 2008 and L'Aquila,Italy 2009). These events have created new and detailed casualty data, which has not until now been properly assembled and evaluated. This book draws the new evidence from recent events together with existing knowledge. It summarises current trends in the understanding of the factors influencing the numbers and types of casualties in earthquakes; it offers methods to incorporate this understanding into the estimation of losses in future events in different parts of the world; it discusses ways in which pre-event mitigation activity and post-event emergency management can reduce the toll of casualties in future events; and it identifies future research needs.

*Making Cities Resilient* Vishwa Raj Sharma,Chandrakanta.2019-02-08 As the world has transformed, so have cities. Today, cities are home to 54 percent of the world's population, and by the middle of this century that figure will likely rise to 66 percent. According to the United Nations (UN) Habitat I (1972), Habitat II (1996) and Habitat III (2016) summits, cities are facing many serious challenges, including growing inequality, security concerns and the worsening impacts of climate change. Uncontrolled urbanization has led to many problems (haphazard growth of areas, emergence of slums, inadequate water and power supply, poor sanitation, shortage of transport and other civic amenities, shrinking green spaces, pollution, crime, and urban disaster risks such as fire, flood, road and industrial accidents, etc.). Worldwide, communities at the international, national and local level are continuously working to improve human habitats. In order to make our planet more sustainable, the UN has moved from the Millennium Development Goals (MDG) to the Sustainable Development Goals (SDG). Among the latter, the aim of SDG 11 is to "...make cities and human settlements inclusive, safe, resilient and sustainable." In

light of these challenges, various terms have emerged to help understand urban issues. Visualizing the problem, the United Nations program "Making Cities Resilient" is focused on mitigating the disaster risk in urban areas. This book analyzes terms such as: sustainable, resilient, livable, inclusive, smart and world class city, which have emerged in the process of combating urban challenges in today's world. The book addresses emerging concepts for cities, challenges and potentials, urban environments, health and planning/policies. Covering 14 large cities in India, as well as case studies from Japan, Singapore, Thailand, Malaysia, Poland and Sweden, it provides a regional dimension to and micro-level perspective on urban issues.

*Constructing a Mind* Antonio Imbasciati.2006-09-27 Can the Protomenta System provide a new foundation for psychoanalytic theory? Constructing a Mind draws on psychoanalytic theories of mind and recent developments in cognitive science to present the Protomenta System, a new and original explanatory theory of the development of the human mind. This book aims to move psychoanalytic theory away from its origins in Freud's theory, towards a model which gives priority to cognition and memory. This, Antonio Imbasciati argues, will make possible a successful and productive integration of psychoanalysis with other areas of psychology. Subjects covered include: The mind as an information-processing system Constructing the system: from fetus to baby, child, and finally adult The caregiver relationship as a decoding system for information processing The paranoid-schizoid metabolism of information Memory of functions and memory traces of affects Internal information generated by the system The depressive position and learning to know Reparation and thought. This thoughtful and thorough account of cognitive development provides a conceptual framework that succeeds in making some of the more complex areas of psychoanalytic theory more intelligible. Constructing a Mind will be of great interest to psychoanalysts, psychotherapists and cognitive psychologists, especially those with an interest in neuropsychology and neonatal development.

**Rockwood and Wilkins' Fractures in Children** James H. Beaty,James R. Kasser.2010 The thoroughly revised, updated Seventh Edition of Rockwood and Wilkins' Fractures in Children offers a complete print and multimedia package: the established gold-standard reference on pediatric fractures and access to an integrated content website. The world's foremost authorities provide comprehensive coverage of all bone and joint injuries seen in children, thoroughly discuss alternative methods for treating each injury, and present their own preferred methods. This edition has a more international group of contributors, more tips and pearls in the authors' preferred method presentations, and expanded coverage of complications.

New chapters cover casting, remodeling and what is unique about children's fractures; principles of physical examination of children with fractures; and treacherous children's fractures. A companion website contains the fully searchable text, an image bank, and videos of the ten most difficult procedures.

**Le 10 attività da fare assieme nei primi 3 anni** Laura Carnevali, Sara Pezzotti, Teresa Farroni, Daniela Lucangeli.2023-11-09 Il volume propone dieci attività ludiche da realizzare con i bambini e le bambine da 0 a 3 anni al fine di potenziare e stimolare il loro sviluppo comunicativo e aiutare i genitori ad accompagnarli nel meraviglioso viaggio dello sviluppo. Le stimolazioni provenienti dall'ambiente influiscono in maniera indelebile sullo sviluppo motorio, sensoriale e cognitivo del bambino, in particolare nel periodo da 0 a 3 anni che rappresenta una finestra temporale di massima predisposizione all'apprendimento. Il bambino vede, tocca, sente tutto ciò che è fuori da sé e via via inizia ad agire nel mondo, con modalità sempre più raffinate dal punto di vista sensoriale, linguistico e motorio. Il volume propone dieci attività ludiche articolate in tre versioni diverse in funzione dell'età del bambino e suddivise in cinque aree tematiche: abilità precoci nell'utilizzo di alcuni canali sensoriali (vista, tatto, udito); precursori dello sviluppo del linguaggio; mutevoli e crescenti capacità motorie dei bambini. Una guida pratica per stimolare lo sviluppo sociale dei bambini, per guardarli con «occhi nuovi», capaci di riconoscere in loro le grandi competenze che già possiedono e che spesso vengono sottostimate. Un'occasione per maturare una maggiore consapevolezza della misura in cui, con le vostre azioni quotidiane, potete incidere positivamente sul loro sviluppo. Programma «Dall'io al noi» La serie si propone di approfondire il ruolo degli aspetti relazionali nello sviluppo comunicativo del bambino, ponendo l'accento sul contributo dell'ambiente sociale in cui è inserito nel definire il percorso della sua traiettoria evolutiva. Il Programma «Dall'io al noi» si compone di tre volumi. Ciascun volume comprende una prima parte in cui sono introdotti i fondamenti teorici sul tema e le più recenti evidenze provenienti dalla letteratura scientifica, che funge da solide fondamenta per la seconda parte, in cui vengono fatte delle proposte operative per giocare con i bambini e le bambine.

*From Pain to Violence* Felicity de Zulueta.2006-05-01 Violence is all around us; yet, despite its widespread prevalence, we remain unclear about its causes. In this book Felicity de Zulueta - begins by defining violence as distinct from aggression, and then attempts to trace its origins, highlighting the polarization between those who believe mankind to be innately violent and those who see violence as the outcome of man's life experiences. As a result of her investigations, the author suggests that the current high level of violence may well be linked to the effects of childhood and adult trauma which appear to be far more widespread than has hitherto been acknowledged. These findings are relevant to understanding why normal people can become violent in certain conditions. This is a second edition and has been fully updated. A new chapter on terrorism has

been added.

**Teaching Patients with Low Literacy Skills** Cecilia Conrath Doak, Leonard G. Doak, Jane H. **What Is the Evidence on the Role of the Arts in Improving Health and Well-Being** Daisy Fancourt, Saoirse Finn. 2019-06 Over the past two decades, there has been a major increase in research into the effects of the arts on health and well-being, alongside developments in practice and policy activities in different countries across the WHO European Region and further afield. This report synthesizes the global evidence on the role of the arts in improving health and well-being, with a specific focus on the WHO European Region. Results from over 3000 studies identified a major role for the arts in the prevention of ill health, promotion of health, and management and treatment of illness across the lifespan. The reviewed evidence included study designs such as uncontrolled pilot studies, case studies, small-scale cross-sectional surveys, nationally representative longitudinal cohort studies, community-wide ethnographies and randomized controlled trials from diverse disciplines. The beneficial impact of the arts could be furthered through acknowledging and acting on the growing evidence base; promoting arts engagement at the individual, local and national levels; and supporting cross-sectoral

collaboration.

**Pedagogy and Human Movement** Richard Tinning.2009-09-10 Across the full range of human movement studies and their many sub-disciplines, established institutional practices and forms of pedagogy are used to (re)produce valued knowledge about human movement. Pedagogy and Human Movement explores this pedagogy in detail to reveal its applications and meanings within individual fields. This unique book examines the epistemological assumptions underlying each of these pedagogical systems, and their successes and limitations as ways of (re)producing knowledge related to physical activity, the body, and health. It also considers how the pedagogical discourses and devices employed influence the

ways of thinking, practice, dispositions and identities of those who work in the fields of sport, exercise and other human movement fields. With a scope that includes physical education, exercise and sports science, sports sociology and cultural studies, kinesiology, health promotion, human performance and dance, amongst other subjects, Pedagogy and Human Movement is the most comprehensive study of pedagogical cultures in human movement currently available. It is an invaluable resource for anybody with an interest in human movement studies.
