Department of Health Great Britain: Parliament: House of Commons: Committee of Public Accounts, 2007-04-17 The National Programme for IT in the NHS (the Programme) was set up to utilise information technology to help provide high quality services to patients, using centrally managed procurement to provide impetus to the uptake of IT and to secure economies of scale. Expenditure on the Programme is expected to be £12.4 billion over ten years to 2013-14. Following a

National Audit Office report (HC 1173, session 2005-06, ISBN 9780102938289), the Committee examined progress made by the Department of Health in implementing the Programme, particularly the current status of the shared electronic patient clinical record; the costs of the Programme; the local management and implementation of the systems within the NHS; the extent to which clinicians were involved in developing the systems; the management of suppliers; and patient confidentiality. Four overall conclusions are drawn: (1) the piloting and deployment of the shared electronic patient clinical record is already running two years behind schedule and no firm implementation date exists; (2) the suppliers to the Programme are clearly struggling to deliver (one of the largest, Accenture, has now withdrawn), and the Department is unlikely to complete the Programme anywhere near its original schedule; (3) the Department has much still to do to win hearts and minds in the NHS, especially among clinicians, and needs to show that it can deliver on its promises, supply solutions that are fit for purpose, learn from its mistakes, and respond constructively to feedback from users in the NHS; (4) there is still much uncertainty about the costs of the Programme for the local NHS and the value of the benefits it should achieve.

Smart Business and Digital Transformation Sándor Gyula Nagy, Tamás Stukovszky, 2023-06-15 Beginning in the mid-2010s, the Fourth Industrial Revolution has seen remarkable changes in information technology that have blurred the boundaries between the physical, digital and biological worlds. Industry 4.0 has enabled so-called smart factories in which computer systems equipped with machine learning algorithms can learn and control robotics with minimal need for human input. While smart technology has enabled many manufacturing businesses to increase efficiency and cut costs, many others are still struggling with implementing it. This book aims to help students, practitioners and industry leaders to become change agents and take their first steps on the path of transformation. Smart Business and Digital Transformation addresses the challenge of becoming smart from three different perspectives: smart factory, smart industry and smart environment. Covering technologies including the Internet of Things (IoT), cloud, artificial intelligence (AI), mobility, 5G and big data analytics, the book shows how enterprises can take advantage of them and ultimately beat the competition. The book considers the importance of operational processes, business models and organisational culture. The contributing authors and editors, based at Corvinus University, present a multidimensional picture of Industry 4.0 which is both diverse in its voices and unified in its vision. Smart Business and Digital Transformation meets the growing demand for a textbook that not only presents the latest concepts and theories but is also practical for planning, managing and implementing digital transformation in practice. The chapters include case studies to demonstrate the practical applications, and each chapter ends with review and discussion questions to develop students' skills and competencies. Students of business and digital transformation on advanced undergraduate and MBA courses will find it an indispensable guide to a vibrant and challenging topic.

Responsible Procurement Stefan Aichbauer, Martina Buchhauser, Agnes Erben, Sven Steinert, Detlef Tietze, Emilia Wiking, 2022 This open access book emphasizes that procuring goods at the expense of the environment and those who live there is no longer acceptable. Fortunately, there is now an unstoppable force, created by a collective of diverse stakeholders, driving the sustainability agenda. A company's sustainability standards can only truly be as good as those along its entire supply chain. The purpose of this book is to encourage and inspire companies on their journey to transform into responsible

and sustainable businesses by addressing the supply chain, which reflects a significant part of a company's expenses and thus the impact procurement can make. The authors, accomplished procurement leaders, and experienced management consultants offer an end-to-end sustainability approach, from defining targets and ambitions to anchoring sustainability within an organization and its decision-making processes.
