Naiades et autres bivalves d'eau douce de France Vincent Prié. 2017-12 Les bivalves d'eau douce sont des animaux peu charismatiques, souvent difficiles à observer et mal connus des naturalistes. Pourtant, ils peuvent nous raconter des histoires naturelles extraordinaires. Certaines espèces vivent jusqu'à 280 ans et peuvent donc témoigner de deux siècles d'histoire des rivières de France. Le cycle reproductif des Naiades, avec l'intervention d'un poisson-hôte, en fait des animaux très mobiles pendant les premiers stades de leur vie. Au contraire, les Cyclades sont vivipares et les adultes protègent les juvéniles à l'abri de leurs valves pendant leur première phase de croissance. Les coquilles et les perles ont fait couler beaucoup d'encre et on dispose de nombreux témoignages historiques à leur sujet. Alors qu'elles peuvent constituer plus de 90% de la biomasse benthique dans des écosystèmes préservés, les Naiades ont régressé d'une manière alarmante au cours du XXe siècle et il est difficile d'imaginer ce que pouvaient être les rivières de France à l'époque où des centaines de milliers de bivalves filtraient leurs eaux en permanence. Ce guide propose un panorama sur les espèces de bivalves d'eau douce de France, avec une présentation générale et des monographies pour chaque espèce. Puisse-t-il sensibiliser les usagers et les gestionnaires de nos rivières à la protection de ces sentinelles des eaux douces de France.

When do fishes become juveniles? G.H. Copp, Vladimír Kováč, K. Hensel. 1999-09-30 Metamorphosis and the transition from larvae or embryos to juveniles in fishes are important in order to answer, for example, questions about: (1) life-history styles and their modifications in evolutionary perspective and within current environmental demands; (2) the development and application of fisheries recruitment models, (3) the use of ontogenetic scales for interspecific comparisons, (4) the identification of ontogenetic shifts in resource use, and (5) the discovery of evolutionary interrelationships of species or genera. This volume is dedicated to recent studies and reviews of existing knowledge on this insufficiently-addressed area of ichthyology. Most of the papers in this volume were presented in Bratislava, Slovakia, at the 1st International Workshop of

the Fish Ontogeny Network of Europe (FONE) in September 1997, a meeting sponsored in part by the European Commission. This volume emphasizes an integrated approach to the study of fish ontogeny, which is a process during which one event is related to another and everything is related to everything else, encompassing physiology, morphology, behaviour and niche. Within this comprehensive perspective, the papers in this volume are grouped along four major themes: reflections on early ontogeny and metamorphosis, organism-environment relationships, ontogeny of predator-prey interactions, and behaviour and ontogeny. Among other issues, the papers consider topics such as whether one can identify when fish metamorphosis ends, whether the larva period begins with hatching or with the onset of exogenous feeding, whether fish ontogeny is 'saltatory' or 'gradual', and whether larvae are eliminated in some fishes with direct development. The keynote paper of this volume reviews the main topics within contemporary paradigms and the final paper concludes that the onset of the juvenile period can be identified in some species, but precision remains problematic, emphasizing the need for further research in this dynamic area of fish biology.

Generalized Additive Models T.J. Hastie.2017-10-19 This book describes an array of power tools for data analysis that are based on nonparametric regression and smoothing techniques. These methods relax the linear assumption of many standard models and allow analysts to uncover structure in the data that might otherwise have been missed. While McCullagh and Nelder's *Generalized Linear Models* shows how to extend the usual linear methodology to cover analysis of a range of data types, *Generalized Additive Models* enhances this methodology even further by incorporating the flexibility of nonparametric regression. Clear prose, exercises in each chapter, and case studies enhance this popular text.

The Notebooks of Joseph Joubert Joseph Joubert.2005-06-30 The elusive French luminary Joseph Joubert is a great explorer of the mind's open spaces. Edited and translated by Paul Auster, this selection from Joubert's notebooks introduces

a master of the enigmatic who seeks to call everything by its true name while asking us to remember everything is double. Joubert speaks in whispers, Auster writes. One must draw very close to hear what he is saying.

Water for People, Water for Life World Water Assessment Programme (United Nations). 2003 The world's freshwater resources are coming under growing pressure through such environmental hazards as human waste, urbanization, industrialization, and pesticides. The problems are exacerbated through drought in many parts of the world. The improvement of the water quality itself and access to it have been major concerns for politicians and development agencies for over a decade. First officially formulated at the Rio Earth Summit of 1992, they have been restated or expanded since then. The UN Millennium Declaration of 2000 transformed general guidelines into specific targets. The international community pledged to halve by 2015 the proportion of people who are unable to reach, or to afford, safe drinking water and to stop the unsustainable exploitation of water resources, by developing water management strategies at the regional, national and local levels, which promote both equitable access and adequate supplies. Thus, ten years after Rio it is time to take stock. Based on the collective inputs of 23 United Nations agencies and convention secretariats, this Report offers a global overview of the state of the world's freshwater resources. It is part of an on-going assessment process to develop policies and help with their implementation as well as to measure any progress towards achieving sustainable use of water resources. Generously illustrated with more than 25 full-color global maps and numerous figures, the report reviews progress and trends and presents seven pilot case studies of river basins representing various social, economic and environmental settings: Lake Titicaca (Bolivia, Peru); Senegal river basin (Senegal, Mali, Mauritania, Guinea); Seine Normandy (France); Lake Peipsi/Chudskoe (Estonia, Russia); Ruhuna basin (Sri Lanka); Greater Tokyo region (Japan); and Chao Phraya

(Thailand). It assesses progress in 11 challenge areas, including health, food, environment, shared water resources, cities, industry, energy, risk management, knowledge, valuing water and governance. Proposing methodologies and indicators for measuring sustainability, it lays the foundations for regular, system-wide monitoring and reporting by the UN, together with the development of standardized methodologies and data. With its comprehensive maps, glossary, references and coverage of a broad range of themes and examples of real-world river basins, the UN World Water Development Report will no doubt prove to be a most valuable reference work. Visit the United Nation's Water Portal for more information on the report and on the International Year of Freshwater 2003.

Land Use Intensification Saul Cunningham, Andrew Young, David Lindenmayer. 2012-07-18 There can be little doubt that there are truly colossal challenges associated with providing food, fibre and energy for an expanding world population without further accelerating already rapid rates of biodiversity loss and undermining the ecosystem processes on which we all depend. These challenges are further complicated by rapid changes in climate and its additional direct impacts on agriculture, biodiversity and ecological processes. There are many different viewpoints about the best way to deal with the myriad issues associated with land use intensification and this book canvasses a number of these from different parts of the tropical and temperate world. Chapters focus on whether science can suggest new and improved approaches to reducing the conflict between productive land use and biodiversity conservation. Who should read this book? Policy makers in regional, state and federal governments, as well as scientists and the interested lay public.

The Rejection of Consequentialism Samuel Scheffler. 1994-08-11 In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of

consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which agents are always permitted, but not always required, to produce the best outcomes.

Human Ecodynamics Association for Environmental Archaeology. Symposium, Association for Environmental Archaeology. 2000 The papers in this book were first presented at the Association for Environmental Archaeology conference at Newcastle upon Tyne in 1998. The aim of the conference was to encourage contributors to examine the inter-relationships between classes of data that have increasingly come to be treated in isolation and to encourage thinking about theory in environmental archaeology. Authors have focused on explicit development of theory, others on bridging barriers between different fields of study or classes of evidence. The notion that people are influenced, but not necessarily determined, by the environments in which they live, may seem like a truism, but an ecodynamic perspective however requires us to question the human impact on the environment, disregarding agricultural influences. Human Ecodynamics discuss how people have been affecting, and affected by environmental variables around them since the beginning of time. Archaeologists are peculiarly well placed to link culture and nature together as the discipline discerns thriving socio-cultural and biological traditions. This thinking is applied to the way in which we conduct our studies of the world around us, and to the boundaries between the

various disciplines and sub-disciplines into which we sub-divide the subject matter of investigation.

Tracking Environmental Change Using Lake Sediments John P. Smol,H.J. Birks,William M. Last.2004-12-30

Paleolimnology is a rapidly developing science that is now being used to study a suite of environmental and ecological problems. This volume is the fourth handbook in the Developments in Paleoenvironmental Research book series. The first volume (Last & Smol, 2001a) examined the acquisition and archiving of sediment cores, chronological techniques, and large-scale basin analysis methods. Volume 2 (Last & Smol, 2001b) focused on physical and chemical methods. Volume 3 (Smol et al. , 2001), along with this book, summarize the many biological methods and techniques that are available to study long-term environmental change using information preserved in sedimentary profiles. A subsequent volume (Birks et al. , in preparation) will deal with statistical and data handling procedures. It is our intent that these books will provide sufficient detail and breadth to be useful handbooks for both seasoned practitioners as well as newcomers to the area of paleolimnology. These books will also hopefully be useful to non-paleolimnologists (e. g. , limnologists, archeologists, palynologists, geographers, geologists, etc.) who continue to hear and read about paleolimnology, but have little chance to explore the vast and sometimes difficult to access journal-based reference material for this rapidly expanding field. Although the chapters in these volumes target mainly lacustrine settings, many of the techniques described can also be readily applied to fluvial, glacial, marine, estuarine, and peatland environments. This current volume focuses on zoological indicators preserved in lake sediments, whilst Volume 3 focused on terrestrial, algal, and siliceous indicators.

Tracking Environmental Change Using Lake Sediments John P. Smol,H.J. Birks,William M. Last.2006-04-11 This third volume in the Developments in Paleoenvironmental Research series deals with the major terrestrial, algal, and siliceous

indicators used in paleolimnology. Other volumes deal with the acquisition and archiving of lake sediment cores, chronological techniques, and large-scale basin analysis methods (Volume 1), physical and geochemical parameters and methods (Volume 2), zoological techniques (Volume 4), and statistical and data handling methods (Volume 5). These monographs will provide sufficient detail and breadth to be useful handbooks for both seasoned practitioners as well as newcomers to the area of paleolimnology. Although the chapters in these volumes target mainly lacustrine settings, many of the techniques described can also be readily applied to fluvial, glacial, marine, estuarine, and peatland environments.
