A Manual of Medical Laboratory Technology Arvind H Patel.2021-05-11 Notes - Approximate scale information: 10 m - The morphological characteristics of the hematopoietic cells are shown as seen in a Wright's stain, May-Giemsa stain or May-Grunwald-Giemsa stain. Alternative names of certain cells are indicated between parentheses. - Certain cells may have more than one characteristic appearance. In these cases, more than one representation of the same cell has been included. - Together, the monocyte and the lymphocyte comprise the agranulocytes, as opposed to the granulocytes (basophil, neutrophil and eosinophil) that are produced during granulopoiesis. - B., N. and E. stand for Basophilic, Neutrophilic and Eosinophilic, respectively - as in Basophilic promyelocyte. For lymphocytes, the T and B are actual designations. [1] The polychromatic erythrocyte (reticulocyte) at the right shows its characteristic appearance when stained with methylene blue or Azure B. [2] The erythrocyte at the right is a more accurate representation of its appearance in reality when viewed through a microscope. [3] Other cells that arise from the monocyte: osteoclast, microglia (central nervous system), Langerhans cell (epidermis), Kupffer cell (liver). [4] For clarity, the T and B lymphocyte are split to better indicate that the plasma cell arises from the B-cell. Note that there is no difference in the appearance of B- and T-cells unless specific staining is applied.

Medical Laboratory Technology Valerie Dietz Polansky.2003-01-01 This book is intended to serve as a study aid to improve student performance on national certification examinations in medical laboratory technology (clinical laboratory science) at both the technician and technologist levels. The new organisation of topics also makes the book useful to students as they prepare for examinations in their educational programs and to laboratory personnel who are cross-training. The book is based on over twenty years of experience teaching hundreds of students who have successfully passed certification examinations at both technician and technologist levels. The book is written in rapid-fire question/answer format, without distractors that may be mistakenly assimilated as the correct answer. Readers are challenged to generate their own answer rather than choosing one based on recognition or guessing. The two boxes next to each question are a time-management aid that enable the reader to keep track of correct and incorrect answers and quickly identify topics that require further study. Many of the answers provide additional information beyond what was requested in the question. These questions and

answers provide a review of the knowledge-base required to answer typical examination questions.
