**A Manual of Medical Laboratory Technology** Arvind H Patel, 2021-05-11 Notes - Approximate scale information: 10 m - The morphological characteristics of the hematopoietic cells are shown as seen in a Wright's stain, May-Giemsa stain or May-Grunwald-Giemsa stain. Alternative names of certain cells are indicated between parentheses. - Certain cells may have more than one characteristic appearance. In these cases, more than one representation of the same cell has been included. - Together, the monocyte and the lymphocyte comprise the agranulocytes, as opposed to the granulocytes (basophil, neutrophil and eosinophil) that are produced during granulopoiesis. - B., N. and E. stand for Basophilic, Neutrophilic and Eosinophilic, respectively - as in Basophilic promyelocyte. For lymphocytes, the T and B are actual designations. [1] The polychromatic erythrocyte (reticulocyte) at the right shows its characteristic appearance when stained with methylene blue or Azure B. [2] The erythrocyte at the right is a more accurate representation of its appearance in reality when viewed through a microscope. [3] Other cells that arise from the monocyte: osteoclast, microglia (central nervous system), Langerhans cell (epidermis), Kupffer cell (liver). [4] For clarity, the T and B lymphocyte are split to better indicate that the plasma cell arises from the B-cell. Note that there is no difference in the appearance of B- and T-cells unless specific staining

is applied.

*Concise Notes of Medical Laboratory Technology* Sushma Uttam Kanukale, 2019-06-07 This book strives to provide the basic fundamental background knowledge by which a learner can be introduced to these practices and to serve as a resource for laboratory personnel and building up of a concept. While blood banking is a science which deals with collecting, testing and transfusing blood and its products for replacement of lost blood. Clinical Pathology is a basic subject in laboratory science which deals with examination of various body fluids / Excreta for presence of multiple factors like chemical, biological and physical as cause or effect of illness. Biochemistry (medical) is a study of chemical components of human body. Estimation of chemical molecules is essential to know disease process at molecular level and thus biochemistry help us to identify abnormal function at earlier stage of diseases and it is also useful for prognostic purpose. The book can be considered as a source of information/ academic performance for students, and personnel's in the discipline of clinical pathology and laboratory medicine, and for physicians and laboratory practitioners. Color illustrations have been used throughout the book to accurately, realistically depict to provide clear image of subject. OBJECTIVES of the book: Students will learn to use common anatomy terms, identify various systems in Human Body and describe working of various systems in Human Body and Organs They'll learn about normal formation & function of various types of blood cells, coagulation mechanism & various factors that cause the significant changes in the no. of specific cells & related clinical conditions. Student will learn theoretical aspects of immuno-hematology and basic blood bank procedures. In clinical pathology, student will learn the normal composition of various body fluids & feces & also the changes in their composition in various clinical conditions. Medical Biochemistry strives to make understand about the normal chemical nature & chemical behavior of human system & how changes in these aspects lead to various clinical conditions. Application of the book: Understanding & getting familiarized with the various facts of Anatomy & physiology so as to acquire a strong foundation to apply these principles in advanced technology area. To develop skills of diagnostic study of blood and its components as well as to acquire the technique of blood collection, testing and its transfusion. To develop the pathological skills of examination of urine, stool, sputum, semen, CSF and fluid. Use skill of clinical biochemistry techniques for pathology tests and analyse the results and provide reports.
