**Cerebral Ischemia** Werner Hacke, Michael Hennerici, Herman J. Gelmers, Günter Krämer, 2012-12-06 Despite a worldwide reduction in its incidence, stroke remains one of the most common diseases generally and the most important cause of premature and persistent disability in the industrialized countries. The most frequent cause of stroke is a localized disturbance of cerebral circulation, i.e., cerebral ischemia. Less common are spon taneous intracerebral and subarachnoid hemorrhages and sinus ve nous thromboses. The introduction of new diagnostic procedures such as cranial computed

tomography, magnetic resonance imaging, digital subtraction radiologic techniques, and various ultrasound techniques has led to impressive advances in the diagnosis of stroke. Through the planned application of these techniques, it is even possible to identify the pathogenetic mechanisms underlying focal cerebral ischemia in humans. However, these diagnostic advances have made the gap between diagnostic accuracy and therapeutic implications even greater than before. This fact can be easily explained. In the past, therapeutic studies had to be based on the symptoms and temporal aspects of stroke; it was impossible for early investigations to consider the various pathogeneses of cerebral ischemia. Inevitably, stroke patients were treated as suffering from a uniform disease.

Both frequent and rare neurological diseases that may require critical care treatment and subjects of more general interest such as monitoring strategies, ethical problems, brain death and neurological disorders in internal medicine have been covered. Pathophysiology is also discussed, inasmuch as it is important for understanding the treatment strategies.

*Neurological & Neurosurgical Intensive Care* Allan H. Ropper, 2012-02-25 This revision - the fifth - contains 19 additional chapters--a result of the expansion of the field of neurocritical care. The most significant addition to the book is the 6-chapter section on neuromonitoring, where significant scientific advances have occurred. The authors plan to increase the number of tables and figures and will use diagrams to present treatment pathways.
