Essay on Water Conservation and Its Importance Sithmi Manik,2020

Water Drops Peter E. Black,2012-08-01 In this engaging book, hydrologist Peter E. Black celebrates the wonder of our planet's most precious natural resource. In these brief, nontechnical essays, readers are introduced to water's unique scientific properties, the vital role it plays in Earth's ecology and ecosystems, and the impact it has had on human history, culture, art, law, and economics. At turns educational and inspirational, humorous and reverent, the book also sounds a cautionary note: water is abundant, but it is also scarce. Only three percent of the earth's water is fresh, and only a small percentage of that fresh water is available for human use and consumption. Therefore, it must be managed carefully, and understood, lest we find ourselves with too little, too late.

Water in the West: the Scary Truth about Our Most Precious Resource Lucinda Sue Crosby,2013-06-21 This is an environmental essay that explores water issues in the West. The author served as a water education conservation specialist for five years in the Mojave desert. She outlines key issues facing water in arid areas and outlines what she believes are future solutions. Here's a look at some of the topics: * The Perils of Over Pumping * Alternative Sources are Costly * New Water Regulations * Using More than We Have * Water Conservation and Education * Is Water the Next Oil? Water is an important topic. Read this expert's opinion and come to your own conclusions.

Essays on Common-pool Resources Kuatbay Koshkarbayevich Bektemirov,2017 This dissertation is comprised of three essays that examine water management and conservation programs through the context of sustainable development. These essays are distinct case studies of national, state and local policies. Their common approach is that they all use common-pool resources theory to generate specific recommendations for policymaking and water management. The first essay explores opportunities for developing policy measures to prevent the collapse of the vital irrigation infrastructure in the Aral Sea region. The paper looks at the economic efficiency of various policy options, impacts on the country's agricultural sector, and the regulations needed to make the cost-sharing irrigation system viable. The results define institutional changes necessary to make reforms feasible. The rationale for policy reform is based on the need to (i) facilitate the transition from a centrally planned agriculture to a market-oriented system; (ii) mediate, if not resolve, land tenure and water management issues; and (iii) analyze the importance of the irrigation infrastructure for sustainable agricultural development. The second essay

examines opportunities for integrating conservation in Arkansas water policy. The paper defines institutional factors and rules-in-use as affecting actions at a state level policy for long-term water management. The findings identify the opportunities for integrating conservation in Arkansas water policy, and the need for re-conceptualizing the nature of state policy towards water resources. It proposes to identify goals and strategies, socioeconomic indicators, and resource indicators to determine if the state is moving toward sustainable water resources, as well as to categorize appropriate management tools. The third essay examines efforts to protect the environment and ensure adequate water to sustain irrigated agriculture in the Bayou Meto Basin, Arkansas. The paper analyses economic and distributional effects of the project to evaluate the policy outcomes in terms of benefits and costs on different stakeholder groups. The findings show the need for integrated water management and to account for opportunity costs of water, including costs associated with economic and environmental externalities. Kaldor-Hicks tableau displays net benefits and impact on all stakeholders, which can help to identify the right kinds of incentives for stakeholder participation to make the project politically feasible.

Sustainable Water Conservation Strategies. A Global Priority Rhoda Kariuki, 2023-05-30 Academic Paper from the year 2023 in the subject Economy - Environment economics, grade: A, , language: English, abstract: The topic of this essay is Water Conservation Strategies and Their Impact. It comprehensively covers the current global priority of water conservation due to freshwater scarcity. There are sustainable strategies used in water conservation, potential solutions to water problems, and even the outcomes. Effective conservation strategies are both individual and collective efforts where the reduction of water usage can be done through fixtures, behavior changes, and reuse to contribute to conservation. There is a need to implement sustainable agricultural practices, promote water-efficient industries and invest in technologies that advocate water treatment and distribution. The potential solutions to water problems are inclusive of demand and supply side strategies. The supply side is the construction of water storage facilities and the implementation of rainwater harvesting methods and desalination processes. The demand side focuses on water management through pricing, water-efficient practices, and public awareness campaigns. Water conservation efforts have led to reduced water consumption, improved water quality, and increased resilience to droughts and climate impact changes.

Strategies of Efficient Management of Water in Agriculture Rupesh Meena, 2016-08-24 Essay from the year 2016 in the subject Geography / Earth Science - Physical Geography, Geomorphology, Environmental Studies, language: English, abstract: Taking into consideration the alarming fact of a water crisis, there is a need to efficient water management to conserve the precious input. This text explains the different strategies for efficient management of water for agricultural use involving: conservation of water, integrated water use and optimal allocation of water. Water is more crucial to Indian agriculture than is commonly perceived. India's water resources are under considerable stress as the race between food production and population growth surges relentlessly. With 4 per cent of the world's water resources and 18 per cent of its

population, the country will be hard pressed to meet the water requirements of the various growing sectors. Continual population growth and the predicted impacts of climate change, including shifts in precipitation and glacier melt, makes the water challenge greater. For better use of water in agriculture in water-limited environments, efforts are needed from different research disciplines: agronomists, plant breeders, plant physiologists, plant biotechnologists, water engineers and others, to develop new approaches in water conservation. For example, is it possible to develop crops that require less water and maintain high yield productivity? Among different approaches water productivity or water use efficiency (WUE) is an efficient approach.

Whose Water is It? Bernadette McDonald,Douglas Jehl,2003 In this book, 14 prominent environmental writers address every aspect of the looming crisis. They explore the paradox that, on a blue planet like ours, little of that resource is actually available for use, and offer alarming and persuasive evidence that we are using what we have much faster than it can be replenished - a problem that will only grow worse as the global population grows and the rate of climate change and airborne pollution quickens. They show the dire consequences of current trends, from desertification to epidemic disease to increasingly bitter battles over who owns water and how to apportion our dwindling supply.--BOOK JACKET.

Essays on the Effectiveness of Environmental Conservation and Water Management Policies Mariano Mezzatesta,2012 An awareness of the effect of agricultural production on the environment has led to the development of policies to mitigate its adverse effects. This dissertation provides analyses of agri-environmental policies designed to protect environmental assets, as well as analytical decision-making tools useful for conducting policy evaluations. The first essay employs propensity score matching techniques to estimate the additionality of federal agricultural conservation programs for six conservation practices for farmers in Ohio. Additionality is an important measure of the effectiveness of conservation programs in inducing an increase in the conservation effort of farmers. Results suggest that additionality is positive and statistically significant for all six conservation practices. However, while programs achieve positive additionality for all practice types, a comparison between conservation practices reveals that certain practice types achieve higher percent additionality than others. Such results, coupled with information on the environmental benefits obtained per practice, could prove useful to program managers for improving the effectiveness of conservation programs. The second essay develops a new methodology to decompose the additionality measure into the two effects induced by conservation programs: expansion versus the new adoption of conservation practices. To do so, the relative contributions of two types of farmers, prior-adopters and new-adopters, are estimated. Results of the decomposition reveal that the additionality for prior-adopters is not significant for all practice types. Instead, additional conservation effort comes from new-adopters adopting new practices. Second, decomposition estimates suggest that practice types with a greater fraction of enrolled farmers that are new-

adopters achieve greater percent additionality than those with greater proportions of prior-adopters. This suggests that a farmers' history in conservation adoption has a significant influence on additionality levels. The final essay analyzes the effect of recent instream flow diversion-guidelines on agricultural water security and streamflows within a decentralized water management regime. Spatially-explicit economic and hydrologic models are integrated to evaluate the tradeoffs between salmon bypass-flows and agricultural water security for three different diversion-guidelines within a northern-California watershed. Results indicate that the most restrictive diversion-guideline provides the greatest protection of bypass-flow days within smaller watersheds; however, within larger watersheds protection is not as significant. Water security, however, decreases sharply under the strict and moderate diversion-guidelines, especially during dry years. Overall, results indicate that greater focus should be given to protecting streamflows in the smallest watersheds, and meeting human water needs during dry years, when agricultural water security is impacted the most.

The Oasis This Time Rebecca Lawton,2019-04-02 NAUTILUS BOOK AWARD WINNER The problem of dominion that has always complicated humanity's relationship with wild places is at the center of Rebecca Lawton's essay collection...her expertise is apparent, as is her enthusiasm. —THE WALL STREET JOURNAL Water, the most critical fluid on the planet, is seen as savior, benefactor, and Holy Grail in these fifteen essays on natural and faux oases. Fluvial geologist and former Colorado River guide Rebecca Lawton follows species both human and wild to their watery roots—in warming deserts, near rising Pacific tides, on endangered, tapped-out rivers, and in growing urban ecosystems. Lawton thoroughly and eloquently explores human attitudes toward water in the West, from Twentynine Palms, California, to Sitka, Alaska. A lifelong immersion in all things water forms the author's deep thinking about living with this critical compound and sometimes dying in it, on it, with too much of it, or for lack of it. *The Oasis This Time*, the inaugural Waterston Desert Writing Prize winner, is a call for us to evolve toward a sustainable and even spiritual connection to water. REBECCA LAWTON grew up exploring rivers and deserts throughout the American West. Her writing on water, climate, and wild and human nature has been honored with a Fulbright Visiting Research Chair, the Ellen Meloy Award for Desert Writers, the Waterston Desert Writing Prize, a WILLA for original softcover fiction, Pushcart Prize nominations in prose and poetry, and residencies at Hedgebrook, PLAYA, and The Island Institute. She lives with guitarist Paul Christopulos in Summer Lake, Oregon, where she directs PLAYA's residency program for writers, artists, and scientists.

Water Jeremy J. Schmidt,2017-04-04 An intellectual history of America's water management philosophy Humans take more than their geological share of water, but they do not benefit from it equally. This imbalance has created an era of

intense water scarcity that affects the security of individuals, states, and the global economy. For many, this brazen water grab and the social inequalities it produces reflect the lack of a coherent philosophy connecting people to the planet. Challenging this view, Jeremy Schmidt shows how water was made a “resource” that linked geology, politics, and culture to American institutions. Understanding the global spread and evolution of this philosophy is now key to addressing inequalities that exist on a geological scale. *Water: Abundance, Scarcity, and Security in the Age of Humanity* details the remarkable intellectual history of America’s water management philosophy. It shows how this philosophy shaped early twentieth-century conservation in the United States, influenced American international development programs, and ultimately shaped programs of global governance that today connect water resources to the Earth system. Schmidt demonstrates how the ways we think about water reflect specific public and societal values, and illuminates the process by which the American approach to water management came to dominate the global conversation about water. Debates over how human impacts on the planet are connected to a new geological epoch—the Anthropocene—tend to focus on either the social causes of environmental crises or scientific assessments of the Earth system. Schmidt shows how, when it comes to water, the two are one and the same. The very way we think about managing water resources validates putting ever more water to use for some human purposes at the expense of others.

Conserving Water Sandra Postel, 1985 This report addresses the global concern of water development and stresses the need for management of the water demand. Investments in water efficiency, recycling, and conservation are recommended over conventional water supply projects for greater cost benefits and production yield. Topic areas include: (1) water use trends in major crop producing regions; (2) investments in irrigation efficiency (with explanations and analyses of gravity systems, surge irrigation, sprinkler designs, micro-methods, and pitcher techniques); (3) new cropping patterns (containing data on the effects of conservation tillage on water storage and data on water consumption rates of selected crops); (4) recycling and reuse projects (including a listing of selected sites of large-scale water reuse programs); (5) urban water conservation problems (specifying savings with water efficient household fixtures); and (6) impact factors (technology, management practices, and governmental policies). Essays on California's Water Economy Hilary Beth Soldati, 2017 This dissertation consists of three essays that provide insights into the economics of water across different dimensions of the resource and its role in the state of California. The first essay examines the social welfare impacts of variation in irrigation supplies that are available through major public projects. Discussion of the value and significance of the irrigation services that are made available through the Sacramento-San Joaquin Bay Delta often focus on the immediate impacts to agricultural production and direct farm jobs. This essay, however, considers the reach of these impacts by evaluating how agriculturally based communities are effected by shortages in irrigation supplies. The second and third essays shift attention toward urban water usage. Methods of forecasting urban water demand are reconsidered and a suggestion is made for an alternative approach to evaluating the predictive power of demand models in the second essay. Finally, the third essay measures the effect of consumption analytics and social norm messaging on household decision-making around water usage. Taken together, these three essays address some of the key features of California's water economy. While there exists much research that measures the impact of precipitation shocks on agricultural regions, whether in production or in other outcomes, less research is available that specifically focuses on the impacts of variation in developed irrigation supplies. Given that developing irrigation infrastructure is oft regarded as an adaptation strategy for climate change, it is worth understanding how shocks in the supply of managed water effect individual and regional outcomes. The first essay exploits exogenous variation in the availability of California's Sacramento-San Joaquin Delta irrigation water to estimate the impact on crime rates for the agricultural counties that use this input. This research provides suggestive evidence in support of the hypothesis that reductions in the availability of this irrigation supply lead to a socially and economically significant increase in both property and violent crime rates. Empirical results support the argument that farm jobs is the mostly likely mechanism, with suggestive evidence that demographic changes are also important. Urban water managers rely heavily on forecasts of water consumption to determine management decisions and investment choices. Typical forecasts rely on simple models whose criteria for selection has little to do with their performance in predicting out-of-sample consumption levels. This essay demonstrate this issue by comparing forecast models selected on the basis of their ability to perform well in-sample versus out-of-sample. Results highlight the benefits of developing out-of-sample evaluation criteria to ascertain model performance. Using annual data on single-family residential water consumption in Southern California, this research illustrates how prediction ability varies according to model evaluation method. Using a training dataset, this analysis finds that models ranking highly on in-sample performance significantly over-estimated consumption $(10\%-25\%)$ five years out from the end of the training dataset relative to observed demands five years out from the end of the training dataset. Whereas, the top models selected using the out-of-sample criteria came within 1% of the actual total consumption. Notably, projections of future demand for the in-sample models indicate increasing aggregate water consumption over a 25-year period, which contrasts the downward trend

predicted by the out-of-sample models. The third essay estimates how household-level water consumption may be impacted by the distribution of Home Water Use Reports (HWURs) by Dropcountr (DC), a digital and web-based consumption analytics platform. Similar to Opower in the energy sector, DC offers social comparison, consumption analytics, and conservation information to residential accounts, primarily through digital communications. Having initiated relationships with several California utilities, as well as major Texas and Colorado providers, the effect of these programs may be measured and will contribute to three areas of academic literature: 1) the study of social norms and moral suasion on consumption behavior, in general; 2) the effects of such methods in the water sector, in specific; and 3) understanding alternatives to price mechanisms in demand-side management of water resources. This research discusses the potential of this type of information to generate measurable effects of interest, both to researchers and to water managers alike. Particular focus will be given to results with a mid-sized California utility and a major Texas provider. Early results indicate an economically and statistically significant 5-8% and 3-4% reduction in average monthly household water consumption for the California and the Texas utility, respectively, for the typical household under treatment of the DC program.
