Multiplication des plantes horticoles (3e éd.) BOUTHERIN Dominique, BRON Gilbert.2013-09-03 La technologie horticole évolue rapidement, notamment dans le domaine de la production des plants. Cet ouvrage présente l'ensemble des procédés de propagation utilisés en horticulture à travers trois grandes parties : la multiplication sexuée, la multiplication végétative et la production de jeunes plants. Chaque chapitre rappelle les fondements biologiques d'une méthode et en développe les aspects gestuels et techniques, en les illustrant de nombreux exemples pratiques : semis, bouturage, greffage, multiplication in vitro, marcottage, éclatage, division, drageonnage. La production des jeunes plants, activité devenue spécialité à part entière, est souvent, pour le professionnel, sujet à interrogation : faut-il produire ou acheter les jeunes plants ? La réponse n'est pas toujours simple. Le dernier chapitre apporte tous les éclairages pour mener à bien cette réflexion. Cette 3e édition a été entièrement revue pour offrir une synthèse des connaissances actuelles. La multiplication in vitro y est notamment développée. Son iconographie renouvelée et augmentée ainsi que sa maquette en couleur contribuent à renforcer son attrait pédagogique. Cet ouvrage s'adresse à un large public. Il constitue un outil indispensable pour les étudiants de l'enseignement horticole, une référence technique incontournable pour tous les professionnels de la filière horticole, mais aussi le guide idéal des amateurs avertis.
