Constance Hoffman Berman

Biographie Universelle, Ancienne Et Moderne ,1856

The Cistercian Evolution Constance Hoffman Berman,2010-08-03 According to the received history, the Cistercian order was founded in Cîteaux, France, in 1098 by a group of Benedictine monks who wished for a stricter community. They sought a monastic life that called for extreme asceticism, rejection of feudal revenues, and manual labor for monks. Their third leader, Stephen Harding, issued a constitution, the Carta Caritatis, that called for the uniformity of custom in all Cistercian monasteries and the establishment of an annual general chapter meeting at Cîteaux. The Cistercian order grew phenomenally in the mid-twelfth century, reaching beyond France to Portugal in the west, Sweden in the north, and the eastern Mediterranean, ostensibly through a process of apostolic gestation, whereby members of a motherhouse would go forth to establish a new house. The abbey at Clairvaux, founded by Bernard in 1115, was alone responsible for founding 68 of the 338 Cistercian abbeys in existence by 1153. But this well-established view of a centrally organized order whose founders envisioned the shape and form of a religious order at its prime is not borne out in the historical record. Through an investigation of early Cistercian documents, Constance Hoffman Berman proves that no reliable reference to Stephen's Carta Caritatis appears before the mid-twelfth century, and that the document is more likely to date from 1165 than from 1119. The implications of this fact are profound. Instead of being a charter by which more than 300 Cistercian houses were set up by a central authority, the document becomes a means of bringing under centralized administrative control a large number of loosely affiliated and already existing monastic houses of monks as well as nuns who shared Cistercian customs. The likely reason for this administrative structuring was to check the influence of the overdominant house of Clairvaux, which threatened the authority of Cîteaux through Bernard's highly successful creation of new monastic communities. For centuries the growth of the Cistercian order has been presented as a spontaneous spirituality that swept western Europe through the power of the first house at Cîteaux. Berman suggests instead that the creation of the religious order was a collaborative activity, less driven by centralized institutions; its formation was intended to solve practical problems about monastic administration. With the publication of *The Cistercian Evolution*, for the first time the mechanisms are revealed by which the monks of Cîteaux reshaped fact to build and administer one of the most powerful and influential religious orders of the Middle Ages.

Atlas of Crustacean Larvae Joel W. Martin,Jørgen Olesen,Jens T. Høeg,2014-07-01 An illustrated guide to the sweeping diversity of crustacean larval forms. Winner of the CHOICE Outstanding Academic Title of the Choice ACRL

Crustaceans—familiar to the average person as shrimp, lobsters, crabs, krill, barnacles, and their many relatives—are easily one of the most important and diverse groups of marine life. Poorly understood, they are among the most numerous invertebrates on earth. Most crustaceans start life as eggs and move through a variety of morphological phases prior to maturity. In Atlas of Crustacean Larvae, more than 45 of the world's leading crustacean researchers explain and illustrate the beauty and complexity of the many larval life stages. Revealing shapes that are reminiscent of aliens from other worlds—often with bizarre modifications for a planktonic life or for parasitization, including (in some cases) bulging eyes, enormous spines, and aids for flotation and swimming—the abundant illustrations and photographs show the detail of each morphological stage and allow for quick comparisons. The diversity is immediately apparent in the illustrations: spikes that deter predators occur on some larvae, while others bear unique specializations not seen elsewhere, and still others appear as miniature versions of the adults. Small differences in anatomy are shown to be suited to the behaviors and survival mechanisms of each species. Destined to become a key reference for specialists and students and a treasured book for anyone who wishes to understand the invertebrate backbone of marine ecosystems, Atlas of Crustacean Larvae belongs on the shelf of every serious marine biologist.

Transformations of Memory and Forgetting in Sixteenth-Century France Nicolas Russell,2011-04-29 This book proposes that in a number of French Renaissance texts, we observe a shift in thinking about memory and forgetting. Focusing on a corpus of texts by Marguerite de Navarre, Pierre de Ronsard and Michel de Montaigne, it explores several parallel transformations of and challenges to classical and medieval discourses on memory.
