**Shaping the Future of Your Business** Heino Hilbig, 2022-02-02 As an entrepreneur - and especially leading a medium-sized company - can you prepare for the future in a targeted manner? Which methods work and where do you succumb to classic thinking errors when planning for the future? This book shows how companies can develop viable future scenarios for their own market in order to remain successful and profitable in the future. Anyone who thought they were operating in a stable market and were prepared for crises was proven wrong by the Corona pandemic. But even less dramatic influences such as technological disruption, side attacks by competitors from outside the industry or end-of-life scenarios are massively changing the environment of companies and demand - at the latest now! - a rethink. In this completely revised 2nd edition, the author shows why early planning for the future can be decisive for success, why one should not rely on experience and intuition, and which mistakes should be avoided. In addition, he explains which tools can be used and put together to form a well-founded process with which future, but also crisis, management can be creatively planned. A useful guide for managing directors, executives, marketing managers and planners in medium-sized companies - with helpful tips, illustrative examples and an individually adaptable template for a future workshop. This book is a translation of the original German 2nd edition *Zukunftsmanagement für den Mittelstand* by Heino Hilbig, published by Springer Fachmedien Wiesbaden GmbH, part of Springer Nature in 2020. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

Life and Its Future Josephine C. Adams, Jürgen Engel, 2021-07-07 This book is aimed at those who wish to understand more about the molecular basis of life and how life on earth may change in coming centuries. Readers of this book will gain knowledge of how life began on Earth, the natural processes that have led to the great diversity of biological organisms that exist today, recent research into the possibility of life on other planets, and how the future of life on earth faces unprecedented pressures from human-made activities. Readers will obtain a perspective on the potential risks of chemical or

nuclear warfare, and the ever-increasing risks from human activities that are causing pollution and climate change with global heating. Readers will also learn about ongoing research efforts to generate “designer lifeforms” through synthetic biology and applications of artificial intelligence. The book makes an integrated, up-to-date, overview of topics often considered as separate fields. It should be valuable to students, teachers, and people who are concerned about the future of life.

Tools and Techniques for Social Science Simulation Ramzi Suleiman, Klaus G. Troitzsch, Nigel Gilbert, 2012-12-06 The use of computer simulations to study social phenomena has grown rapidly during the last few years. Many social scientists from the fields of economics, sociology, psychology and other disciplines now use computer simulations to study a wide range of social phenomena. The availability of powerful personal computers, the development of multidisciplinary approaches and the use of artificial intelligence models have all contributed to this development. The benefits of using computer simulations in the social sciences are obvious. This holds true for the use of simulations as tools for theory building and for its implementation as a tool for sensitivity analysis and parameter optimization in application-oriented models. In both, simulation provides powerful tools for the study of complex social systems, especially for dynamic and multi-agent social systems in which mathematical tractability is often impossible. The graphical display of simulation output renders it user friendly to many social scientists that lack sufficient familiarity with the language of mathematics. The present volume aims to contribute in four directions: (1) To examine theoretical and methodological issues related to the application of simulations in the social sciences. By this we wish to promote the objective of designing a unified, user-friendly, simulation toolkit which could be applied to diverse social problems. While no claim is made that this objective has been met, the theoretical issues treated in Part 1 of this volume are a contribution towards this objective.

**Unsere Zukunft nach Corona** Thies Claussen, 2020-06-05 Ein Blick in die Zukunft: Lohnt sich der überhaupt? Hätten Wissenschaft, Forschung und Politik nicht die Corona-Pandemie 2020 voraussehen müssen? Auch künftig ist die Menschheit nicht vor Pandemien, Krisen, Kriegen oder Naturkatastrophen geschützt. Aber können wir deshalb den Kopf in den Sand stecken und nicht mehr nach vorne blicken? Ganz im Gegenteil: Wir müssen mehr in die Zukunft schauen, um künftige Entwicklungen frühzeitig zu erkennen und gestalten zu können. Dieses Buch bietet eine Fülle von Informationen, Antworten und Anregungen zu wichtigen Zukunftsfragen.

*First International Conference on Resource Efficiency in Interorganizational Networks - ResEff 2013* - Geldermann, Jutta, Schumann, Matthias, 2013-11-26 Renewable raw materials are becoming increasingly important as an alternative resource base in industrial networks. Consequently, research for methods improving the efficient use of renewable resources in production processes with by-products is crucial. The aim is cascade utilization, thus the multiple utilization of a raw material before its conversion into energy. The International Conference on Resource Efficiency in Interorganizational

Networks (ResEff) brings together interdisciplinary researchers developing strategies and solution concepts for efficient resource utilization. It is therefore a platform for scientific exchange both between experts as well as interdisciplinary groups from agricultural and forestry science, mathematical optimization, operations research, marketing, business informatics, production and logistics. The following facets of the challenging topic of resource efficiency in interorganizational networks are covered: Materials, technologies, planning of production and value-added networks for renewable resources as well as governance, coordination and sale of products from renewable resources.

**The Electric Car** Oliver Schwedes, Marcus Keichel, 2020-08-24 The volume is dedicated to the electric car. It examines the extent to which the electric car can contribute to sustainable transport development as part of a new mobility culture. The technical, cultural, political, social and aesthetic dimensions are considered. It will be shown how the general social framework has to change in order to make the electric car a success. This book is a translation of the original German edition "Das Elektroauto" by "Marcus Keichel", published by Springer Fachmedien Wiesbaden in 2013. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

*Social Science Microsimulation* Klaus G. Troitzsch, 1996-09-17 This book gives an overview of the state of the art in five different approaches to social science simulation on the individual level. The volume contains microanalytical simulation models designed for policy implementation and evaluation, multilevel simulation methods designed for detecting emergent phenomena, dynamical game theory applications, the use of cellular automata to explain the emergence of structure in social systems, and multi-agent models using the experience from distributed artificial intelligence applied to special phenomena. The book collects the results of an international conference which brought together social scientists and computer scientists both engaged in a wide range of simulation approaches for the first time.

**Zukunft beginnt heute** Thies Claussen, 2018-05-17 Der wichtige Wegweiser auf dem Weg in unsere Zukunft beschreibt nicht nur die Arbeitswelt von morgen, sondern zentrale Zukunftsthemen wie Künstliche Intelligenz, Biotechnologie, Digitalisierung oder Personalisierte Medizin. Für jeden, der bei Zukunftsfragen mitreden möchte, eine wichtige Orientierung.

*World History of the Automobile* Erik Eckermann, 2001-09-01 This book details the development of the automobile from its early beginnings to the present day. With emphasis on the European historical perspective, particularly the pioneering developments which occurred in Germany, *World History of the Automobile* chronicles the early vehicles by Daimler, Maybach and Benz, the Mercedes Era, the role of motor vehicles in World Wars I and II, and the numerous technological and business revolutions of the second half of the 20th century.

Management in a Dynamic Environment Rico Baldegger,2012-07-09 This book provides basic management knowledge in a clearly structured way. Fundamental aspects of management are described, on the basis of which a model of the enterprise is outlined. This allows readers to find their way around easily, to reflect, then to set new approaches in context and examine them in a critical light. The practical examples, the interpretation questions, and the short case studies at the end of the chapters facilitate the transition from theory to practice.

Systemic Design Peter Jones,Kyoichi Kijima,2019-01-23 This book presents emerging work in the co-evolving fields of design-led systemics, referred to as systemic design to distinguish it from the engineering and hard science epistemologies of system design or systems engineering. There are significant societal forces and organizational demands impelling the requirement for “better means of change” through integrated design practices of systems and services. Here we call on advanced design to lead programs of strategic scale and higher complexity (e.g., social policy, healthcare, education, urbanization) while adapting systems thinking methods, creatively pushing the boundaries beyond the popular modes of systems dynamics and soft systems. Systemic design is distinguished by its scale, social complexity and integration - it is concerned with higher-order systems that entail multiple subsystems. By integrating systems thinking and its methods, systemic design brings human-centred design to complex, multi-stakeholder service systems. As designers engage with ever more complex problem areas, it is necessary to draw on a basis other than individual creativity and contemporary “design thinking” methods. Systems theories can co-evolve with a new school of design theory to resolve informed action on today’s highly resilient complex problems and can deal effectively with demanding, contested and high-stakes challenges.

**Manufacturing Driving Circular Economy** Holger Kohl,Günther Seliger,Franz Dietrich,2023-05-27 This is an open access book. It gathers the proceedings of the 18th Global Conference on Sustainable Manufacturing, held on October 5-7, 2022, as a hybrid event, in/from Berlin, Germany. With a focus on manufacturing advances and practices driving the circular economy, the chapters selected for this book report on sustainable manufacturing technologies for the mobility, energy and construction sector, and for machines and equipments, covering applications of artificial intelligence and industry 4.0. Moreover, they discuss energy-efficient process, waste reuse, and CO2 neutral production, giving a special emphasis to developing sustainable manufacturing in emerging countries. This book offers extensive and timely information for both researchers and professionals in the field of manufacturing and business development.

*Environmental Management in European Companies* Jobst Conrad,2003-09-02 Over the past decade, the greening of industry has become both an issue in scientific and political debate and a generic substantive development in industry itself. This study is the product of an international collaborative research project investigating exemplary cases of successful environmental management in European companies in Denmark, Germany, The Netherlands, Switzerland, Poland, and Latvia with the aim of discovering the reasons and dynamics underlying them and the role environmental policy did and could play.

Providing the background and context of the research project, the nine case studies concern various companies of different sizes and from different industrial branches and describe the social processes leading to substantive environmental achievements and corresponding environmental management systems. This study also evaluates the success stories in a comparative empirical, as well as theoretical, perspective with an environmental policy orientation. Case studies examine the role of a company's internal and external determinants, explaining successful corporate environmental management on the micro-level.

*Experimenting for Sustainable Transport* Remco Hoogma, Rene Kemp, Johan Schot, Bernhard Truffer, 2005-06-29  
Technological change is a central feature of modern societies and a powerful source for social change. There is an urgent task to direct these new technologies towards sustainability, but society lacks perspectives, instruments and policies to accomplish this. There is no blueprint for a sustainable future, and it is necessary to experiment with alternative paths that seem promising. Various new transport technologies promise to bring sustainability benefits. But as this book shows, important lessons are often overlooked because the experiments are not designed to challenge the basic assumptions about established patterns of transport choices. Learning how to organise the process of innovation implementation is essential if the maximum impact is to be achieved - it is here that strategic niche management offers new perspectives. The book uses a series of eight recent experiments with electric vehicles, carsharing schemes, bicycle pools and fleet management to illustrate the means by which technological change must be closely linked to social change if successful implementation is to take place. The basic divide between proponents of technological fixes and those in favour of behavioural change needs to be bridged, perhaps indicating a third way.

Multipersonelles Verhalten bei strategischen Entscheidungen ,2013-07-02 Häufig liegen im Denken und Verhalten der Verantwortlichen Schwächen, die zu gravierenden Fehlentscheidungen führen können. Der Autor deckt Ursachen ineffektiver bzw. ineffizienter Entscheidungen auf und stellt einen Ansatz für eine verbesserte Entscheidungsfindung vor.

*Changing Large Technical Systems* Jane Summerton, 2021-12-13 This international anthology presents case studies of historical and contemporary transformations of large technical systems such as railways, telecommunications, electricity, and automobiles. The authors, working at the forefront of historical and social science research on the dynamics of large technical systems, analyze how and why these systems undergo change. Because of their important roles in contemporary society, large technical systems such as railways, airlines, road systems, telecommunications, and electric power network share drawing considerable academic and political interest. In this collaborative study on processes of change in large technical systems, the contributing authors present historical and current case studies of transformation within these systems. Working at the forefront of historical and social science research on the dynamics of large technical systems, the authors specifically analyze how and why the systems undergo change. In some cases, new technologies are solving old

problems and presenting opportunities for system growth. In other areas, new regulatory approaches have brought competition and deregulation, often posing challenges to system builders. The authors also show how the breakup of national boundaries and new corporate strategies for global management of technology are transforming systems in ways that will have significant impacts on all consumers

*Systemic Management for Intelligent Organizations* Stefan N. Grösser, René Zeier, 2012-10-17 The last two decades increasingly have challenged the field of management by confronting it with rapidly growing levels of dynamism, interconnectedness, and complexity. Systems-based management approaches, their promise already proven, offer great potentials for influencing and coping with this development. This collection of essays offers ideas and exemplary case studies from experts in systemic management, organizational cybernetics, and system dynamics for meeting the challenges in socio-economic systems. This book was compiled to honor the academic achievement of Markus Schwaninger, a leading protagonist in developing the field of systemic management and organizational cybernetics. His stature in the field is demonstrated in the forewords by Raul Espejo and John Sterman. The efforts of 18 researchers and practitioners, all closely related to Markus Schwaninger, offer conceptual and empirical approaches that will allow managers and advanced students of the management profession to analyze, understand, and design intelligent organizations. The book weaves its content from both theory and practice and offers hints for improving a variety of organizations, both private and public, profit and non-profit, and large and small.

*A Transdisciplinary Introduction to the World of Cybernetics* E. W. Udo Küppers, 2023-11-25 This introduction to the world of cybernetics provides the basics and discusses the most important thought leaders, models as well as theories. Practical examples from the fields of biology, ecology, technology, society, and politics are used to illustrate the theoretical material. Questions at the end of the chapters stimulate reflection, and the author does not owe the answers. A central theme in all cybernetic considerations and a guiding theme of the book are information exchange and communication.
