**War and International Relations** Balazs Szanto,2021-07-08 This book provides a critical overview of the occurrence of war in the international system by examining the concept from multiple perspectives and theoretical backgrounds. War is an essential concept in international affairs, if for no other reason than because prevention of war requires an in-depth understanding of it as a concept. This book seeks to examine the continued occurrence of war in international relations, despite the emergence of arguments concerning its obsolescence. It provides a new cognitive framework through which to understand war as a phenomenon, which can be applied to real-world scenarios and policy issues, making use of case studies predominantly from China and Japan. Theoretically, the book is primarily based on a structural realist framework but adopts a significant constructivist component through the emphasis on identity and reputation in the international system. The volume offers a nuanced yet holistic approach to the theory of war and seeks to engage critically with the major theoretical approaches, pointing out the major criticisms of these ideas and how the theories correlate. This book will be of much interest to students of strategic studies, foreign policy, and International Relations.

**Hexagon (KH-9) Mapping Camera Program and Evolution** Maurice G. Burnett,2012 The United States developed the Gambit and Hexagon programs to improve the nation's means for peering over the iron curtain that separated western

democracies from east European and Asian communist countries. The inability to gain insight into vast denied areas required exceptional systems to understand threats posed by US adversaries. Corona was the first imagery satellite system to help see into those areas. Hexagon began as a Central Intelligence Agency (CIA) program with the first concepts proposed in 1964. The CIA's primary goal was to develop an imagery system with Corona-like ability to image wide swaths of the earth, but with resolution equivalent to Gambit. Such a system would afford the United States even greater advantages monitoring the arms race that had developed with the nation's adversaries. The Hexagon mapping camera flew on 12 of the 20 Hexagon missions. It proved to be a remarkably efficient and prodigious producer of imagery for mapping purposes. The mapping camera system was successful by every standard including technical capabilities, reliability, and capacity.
